

AlphaFold provenance for the 625-protein shielding set

Provenance supplemental catalogue

Record snapshot, 29 July 2026

This catalogue lists the 625 AlphaFold DB structures retained in the shielding-model data set after the sequence-identity and structure-quality filters described in Methods. The frozen partition contains 521 fitting, 25 selector and 79 protected structures.

Each row gives the stable AF-<UniProt>-F1 model identifier, protein, source organism, residue count and model partition. Model metadata were recorded from AlphaFold DB on 29 July 2026 (download version 6).

Table 1: AlphaFold structures in the shielding-model data set.

AlphaFold DB model	Protein / source organism	Residues	Partition
AF-A0A062V9G2-F1	Uncharacterized protein <i>Candidatus Methanoperedens nitroreducens</i>	48	Protected
